1103-SMB	784149420027

Description

The Lew Electric 1100-SMB series is a deep, heavy-duty, stamped steel, concrete floor box designed for strength, flexibility, and ease of installation in concrete flooring applications. Offered in 1, 2 or 3 gang, this electrical floor box is fully adjustable, offering 2 ¼" of pre-pour adjustment and ½" of post-pour adjustment using just a screwdriver—making leveling and alignment simple even after the concrete has set. With a generous cubic inch capacity of interior space in each gang, this floor box provides ample room for wiring and device installation. The box includes multiple conduit knockouts—½", ¾", 1", and 1.25" — to accommodate a variety of wiring configurations. A protective concrete cap is included to keep the box clean and debris-free during concrete pouring. For carpeted installations, pair the box with the optional CF-1100 Series carpet flange (sold separately), which adds ⅜" of height to account for carpet and padding. For tile or other flush installations, the 1101-DBE Series tile (sold separately) must be used. To finish installation, one 1100 series cover is required.

Compliance and Certifications

- ETL file #4004534
- Conforms to UL Standard 514A and CSA Standard C22.2 #18
